

## Backup-Recovery Remediation Service

Find and fix the problems that plague your backup environment.

Once considered a minor background task, backup has evolved into a top priority with important compliance and regulatory implications. To reduce operating costs and ensure your backup environment consistently runs at peak efficiency, turn to the Backup-Recovery Remediation Service (BRRS) from Daymark Solutions.

The BRRS is a comprehensive service that provides an incredibly valuable, detailed review of the entire backup-recovery environment, helping IT quickly identify problems and limitations that exist in the current environment. Armed with this information, the backup team can create an informed resolution plan and implement the necessary changes to bring the backup-recovery environment back to optimal state.

By leveraging Daymark's technical experience and proven methodology, companies are assured of reaching key milestones, meeting completion dates and realizing their overall objectives.

### Backup-Recovery Remediation Includes:

#### Assess

- ▼ Determine backup-recovery success and failure rate
- ▼ Understand existing service level agreements
- ▼ Evaluate existing hardware/software infrastructure
- ▼ Understand disaster recovery dependencies

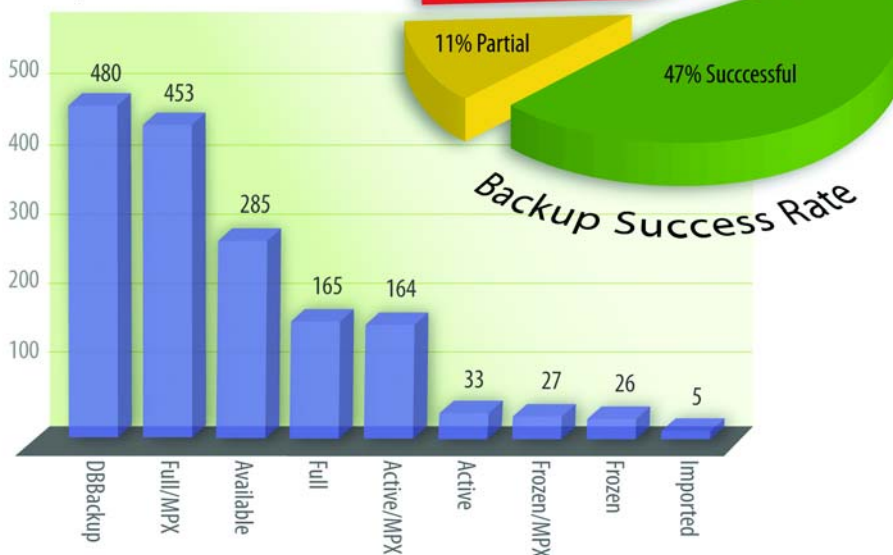

#### Recommend

- ▼ Provide recommended configuration changes
- ▼ Provide recommended process improvements
- ▼ Discuss alternative backup strategies
- ▼ Discuss potential infrastructure modifications

#### Implement

- ▼ Implement configuration changes
- ▼ Install relevant upgrades and additional functionality
- ▼ Document process improvements

Tape Distribution by State

### About Daymark

Daymark Solutions architects, provides and implements effective IT infrastructure solutions for businesses in the Northeastern United States. With in-depth technology knowledge, proven methodologies and a strong focus on backup/recovery, storage infrastructure and high availability, Daymark Solutions can resolve your most difficult technology challenges.

6 Executive Park Drive, N. Billerica, MA 01862, 978.528.6130, www.daymarksi.com

### Case Study

#### Challenge

The backup infrastructure for a leading supplier to the semiconductor industry was overburdened with 20 terabytes of data that took several days to backup and required round-the-clock monitoring by IT.

#### After Backup-Recovery Remediation with Daymark

- ▼ Backup window reduced from 2 days to 13 hours
- ▼ Backup success rates commonly approach 100%
- ▼ Complexity of the backup environment reduced to improve performance
- ▼ Existing licenses redeployed for significant savings
- ▼ Overall storage management reduced, freeing IT to focus on other critical tasks
