DAYMARK CMMC COMPREHENSIVE SERVICES

Developing the required documentation for a Cybersecurity Maturity Model (CMMC) compliance program can be overwhelming. It is particularly challenging for organizations still trying to understand the nuances of CMMC 2.0.

Daymark's CMMC Comprehensive Services provide a white glove approach to a CMMC compliance program where we develop all the documentation needed for a CMMC framework based on your inputs and assist with strategy and scoping of your environment. Daymark's CMMC Comprehensive Services can also be used in conjunction with our Microsoft 365 GCC High migration services where we can help you migrate from Microsoft 365, Microsoft Exchange or Google with our proven 5-phase approach that ensures a smooth transition to Microsoft GCC High.

PROFESSIONAL SERVICE ENGAGEMENT

Daymark's CMMC Comprehensive Services is a professional service engagement offered together with our partner, Critical Prism Defense. Critical Prism Defense is a Microsoft partner with a long history of helping companies in Defense, Aerospace, and Government with custom services, comprehensive assessments and recommendations, ensuring that systems and networks will be protected, staff will be trained, and all necessary government requirements will be met.

We will provide education and training on the 110 controls and 320 assessment objectives from NIST SP 800-171r2 that correlate to CMMC. We guide your organization through each step required in running a compliance program using Microsoft Purview in your GCC High tenant. Daymark will provide education and training about CMMC, inventory and scoping. We will then collaborate to develop scoping diagrams, policies, procedures, a system security plan (SSP) and plan of actions & milestones (POA&M) using our provided format templates. Using Microsoft Purview, we will review the shared responsibilities matrix and CMMC 2.0 Level 2 Microsoft 365 compliance templates. The final step includes a thorough assessment of your implementation to identify any potential gaps. Daymark will also help you prepare for a CMMC assessment by discussing evidence collection and staging needs.

PROJECT DURATION: 8-12 WEEKS

- This project is designed to serve as a compliance program framework for the organization to work towards CMMC 2.0 compliance. The professional engagement includes:
  - Writing of policies (14 Domain policies)
  - Development of supporting documentation (as needed)
  - Guidance for writing procedures to meet policy requirements
- When documentation has been completed, we will conduct a self-assessment with your organization, generate a Supplier Performance Risk System (SPRS) score and discuss the results with the organization's leadership.

PROJECT COST:

- Pricing starts at $30,000 for organizations with 1-50 employees.

WE TAKE THE RISK AND COMPLEXITY OUT OF COMPLIANCE

Daymark is a Microsoft Licensing Partner for Microsoft 365 Government Community Cloud (GCC), GCC High and Azure Government. GCC and GCC High are secure platforms designed for U.S. federal, state, and local governments, as well as for organizations that deal with government data that falls under strict regulatory requirements. GCC High enables Defense Industrial Base (DIB) organizations to meet compliance requirements of CMMC 2.0 Level 2
