

DAYMARK AZURE DATA PROTECTION SOLUTIONS

IT organizations across all industries recognize the importance for reliable and secure backup and recovery for today's mission-critical data. For nearly 20 years, Daymark Professional Services has been protecting organizations' business-critical data ensuring accessibility, compliance, and fast and full recovery in the event something goes wrong.

Reliable Cloud Data Backup and Recovery

The Microsoft Azure cloud, together with many of the industry's top backup/replication solutions, provide Daymark clients with highly optimized, efficient, and cost-effective data protection in the cloud.

Daymark is a Microsoft Tier 1 Cloud Service Provider offering professional, managed and support services for Azure. We have multiple Microsoft data center and cloud competencies that enable us to deliver the most robust cloud and hybrid solutions for customers of all sizes.

By leveraging our deep expertise in Azure, together with our many years of data center backup and recovery experience, our clients consistently reduce their maintenance and management costs year-over-year while improving data management capabilities, cost efficiencies, and enterprise level data protection.

Our Cloud Partners

Daymark works with many of the industry leaders in the backup and replication space, all of whom provide seamless integration with Azure and other public clouds.

Key reasons to work with Daymark Professional Services

- Over 700 complex IT deployments
- Microsoft Tier 1 Cloud Service Provider
- Microsoft Gold Competency in Cloud Platform
- 5 Silver Competencies including Datacenter and Cloud Platform
- Member of the elite Microsoft Managed Partner Program
- 24/7 locally staffed Network Operations Center
- Direct access to Microsoft support resources
- Rapid provisioning of new customer tenants and subscriptions on Azure

Azure Backup and Disaster Recovery Solutions

Partnering with Daymark as your Microsoft Cloud Service Provider enables you to leverage the agility, scalability and cost benefits of the cloud, supported by Daymark and Microsoft's extensive service capabilities. We can provide a comprehensive suite of cloud-based backup and disaster recovery (DR) options that replace or augment your existing on-premises or off-site backup solution.

Key Components of Cloud Backup and Disaster Recovery Solutions

Together with our industry partners that support Azure, Daymark Professional Services can architect a customized solution by offering a wide-range of industry-leading solutions for a complete business continuity and disaster recovery (BCDR) strategy that delivers the following benefits:

- **Disaster recovery in the cloud**—Replicate workloads running on VMs and physical servers to Azure, eliminating the cost and complexity of maintaining a secondary data center
- **Flexible replication for hybrid environments**—Replicate any workload running on supported on-premises Hyper-V VMs, VMware VMs, and Windows/Linux physical servers
- **Migration**—Migrate on-premises AWS instances to Azure VMs or migrate Azure VMs between Azure regions
- **Simplified BCDR**—Deploy replication from a single location in the Azure portal and run simple failovers and failback of single and multiple machines
- **Resilience**—Orchestrate replication and failover without intercepting application data. Replicated data is stored in Azure storage, providing different levels of resiliency based on options during creation of the storage account.
